

IUCEE Soft Skills Course 2020

Ballari Saha, Vidya Jyothi Institute of Technology

"I represent the training and placement cells here in VJIT. I think it was a very good idea that you talked about the course that will be introduced on soft skills. Our students highly enjoyed it. They are waiting for the certificates eagerly."

Dipali Kadam, Rajarambapu Institute of Technology

"It is really a great experience, to learn something new through these webinars; as well as the initiative taken regarding upcoming faculty development programs this is really one more opportunity to all of us to learn something and apply it in our classes"

Anima P., KJ Somaiya College of Engineering

"I am from the Department of Science and Humanities in KJ Somaiya College of Engineering and I teach communication and soft skills in the college. What I was teaching was from the textbooks and from Dr. Manu Vora's insightful talks I learned a lot and am more confident that I can teach my children because I have heard him sharing his experiences of actually working in an organization"

Kanchana Jeganathan, PSG Institute of Advanced Studies

"I really want to congratulate Dr.Krishna Vedula, Dr.Manu Vora and Deepak sir for taking this initiative and it is the need of the hour. All our faculty members and students are all at home. They are learning digitally but they don't know how to plan and organize the things, so your Project Management, Leadership, Time Management all these skills required for the need of the hour. I really enjoyed the course, attending all the six modules plus correcting the students' papers so we can actually know what is going on in their mind regarding the time management and project management. It is really a good opportunity to bring out their own ideas out of it. As you suggested it is also required for the faculty members. So it is a good idea that you are going to conduct the training program for the teachers; then more of the student community can get benefitted out of it."

G.Durga Prasad, Shri Vishnu Engineering College for Women

I thank Manu Vora sir and Krishna Vedula sir for giving such a good platform in various activities for both teachers and students. It's a difference experience evaluating the students scripts, we can really know whether the student is participating in the sessions or not and how effectively the student is learning. We are really looking forward to organize such a good program for faculty as well."

Maya Kurulekar, Vishwakarma University

"Our students and myself and Dr.Kailash Patil, we have enjoyed all the sessions. We really learnt a lot. It is really a good idea if we could conduct such sort of soft skill courses for all the students at our campus and also for the faculty members. It will a really good idea."

P.Mohammed Muneer, Nalla Malla Reddy Engineering College

"Our students participated very enthusiastically. I am basically a Mechanical Engineer with specialization in Thermal Engineering, this is entirely different content to me but even then I enjoyed a lot. In our college we are having MBA also, if we give training to those people, it will be beneficial to us also. They will take the lead and they may train the students also as well as the faculty."

Raghavendraprasad Deshpande, Malnad College of Engineering

“Our college, MCE, recently we have introduced two mandate audit courses; Language Skills and Social Skills and I very much sure that whatever the inputs we have received from this course that some part or to the fuller extent that the skills learned in this course can be transformed in the syllabus in our autonomous curriculum.”

Parveen Abroi, Model Institute of Engineering and Technology

“This is a great time we are concluding one of our greatest courses of today because nobody is thinking of soft skills in Engineering. Me being from a corporate background, I understand it very well. I will relate to a painting theory wherein I have already had a primer session in my corporate in this soft skills where I was not trained where I actually had to do all these things and learn it the hard way but when Dr.Manu Vora has trained us it is like the final painting, so the right finish has come wherein I can teach it now.”

Roopa Priya V.K., Vidya Vardhaka College of Engineering

“This was my first program with IUCEE and this was an amazing program. A special thanks to Dr.Manu Vora for sharing his experience. We learnt a lot through your experience in every session. And I would also like to thank Dr.Krishna for all his patience, And we also had Dr.Deepak who has always been supportive, so special thanks goes to him too. And the best part of this workshop was you included the faculty and the students. Though this was designed for students, we also became your student and we learnt a lot. So you gave us an opportunity to learn with our students like a student. So thank you so much for combining us, though we were there for grading but we were also actually learning. That was the best part of this program. Every topic was very beautifully explained and overall it was great learning experience. And talking about the upcoming program our students also excited to take this through and start their own teams and conduct few workshops now that you have given a wonderful idea of having a Faculty Development Program now we are totally excited. **We are already in.** Thank you so much.”

Rudragouda Patil, MIT Academy of Engineering

“I am looked after corporate training for our students and one good that I would like to mention here is I have been associated with IUCEE since 2016 with various programs, such as IIEECP and recently going through Soft Skills training for students and teachers. It was an excellent program. I also look after entrepreneurship skills for our college, so the trainings that IUCEE has identified both Soft Skills as well as Entrepreneurship skills are very much required for a nation like India now. I welcome this course and will be very happy to be involved in this course.”

Rosy Ronald, CMR College of Engineering and Technology

“Manu Vora sir did an amazing job. I cannot forget all the previous faculty and this faculty, it has been loads of information that we have got and the journey has been amazing. You all have proved that there is no age limit for us to learn. We are always learning.”

Shubha Muralidhar, BMS College of Engineering

“It was a great event for me because I am from the Management department and we run a program called *Personality Development and Communication Skills* to all the engineering branches. I am also part of a program *Campus to Corporate*; we schedule certain programs on some soft skills and run it for different engineering programs. At the individual level it was definitely useful for me. We look forward to more learning from you.”
